

Martin Long Hoang Tran

(714) 400-1091 - 23martintran@gmail.com - <https://www.linkedin.com/in/23martintran/> - <https://github.com/martintran23>
Software Engineer Intern

EDUCATION

Cal State University, Fullerton - Bachelor of Science, Computer Science

Expected in May 2027

PROJECTS

WeCalendar | Shared Calendar & Notes Platform | Full-Stack Web Application

Aug 2026 - Present

- Designed **PostgreSQL** schema with **RLS** across 10 tables, workspace invite **RPCs**, and 9 SQL migrations.
- Engineered **Supabase** realtime synchronization across 7 tables for live multi-user calendar, tag, and notes updates.
- Built client-side scheduling conflict detection with recurrence-series grouping, replacing hard database overlap constraints with soft UI warnings.
- Implemented collaborative Notes with **TipTap** rich text, shared/private **RLS**, folders, and calendar event linking.
- GitHub: <https://github.com/WeCalendar1/WeCalendar>

WattTime | Solar Energy Optimization Platform | CloudHacks 2026 @ UCI

Apr 2026

- Built a full-stack application that optimizes appliance usage using solar forecasts and location-based data.
- Designed an event-driven pipeline with **AWS API Gateway** and **Step Functions** for scalable optimization workflows.
- Reduced response time by **66% (45s → 15s)** by refining LLM prompts and improving inference efficiency.
- Implemented geocoding with **Amazon Location Service** and deployed via **AWS Amplify** with CI/CD.
- GitHub: <https://github.com/martintran23/zotwatt>

EXPERIENCE

Software Development Intern, OpenQQuantify - Vienna, VA

May 2025 - Oct 2025

- Developed an AI-powered chatbot, improving FAQ accuracy by **50%** and reducing response time by **10 seconds**.
- Built a Python ETL pipeline processing **50K+ drug label records**, reducing manual data preparation by **15 hrs/week**.
- Designed and implemented RESTful APIs and a responsive frontend for real-time user interaction in an **Agile** development environment using **Git**-based workflows (feature branching, version control).

Software Engineer Intern - AI/ML, Product Manager Accelerator - Boston, MA

Jun 2025 - Sep 2025

- Designed backend systems using **FastAPI** and **MongoDB** to store and manage **1,000+ user records**.
- Improved system scalability by implementing persistent chat storage, supporting **2× projected user growth**.
- Implemented chat history retrieval with optimized MongoDB queries and indexing for multi-session interactions.

PROFESSIONAL DEVELOPMENT

System Engineer Participant, NASA L'SPACE Program - Tempe, AZ

May 2025 - Aug 2025

- Researched technologies aligned with NASA's Technology Taxonomy, including radiation modeling, mitigation, and life support systems for long-duration missions.
- Analyzed systems engineering tradeoffs for spacecraft safety, survivability, and mission-critical operations.
- Evaluated technical proposals using NASA review criteria and provided structured feedback.
- Designed and refined CAD models using **Siemens NX** to support system-level concepts.

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, JavaScript, SQL

Frameworks & Tools: Next.js, React, Node.js, FastAPI, Flask, Tailwind CSS, Bootstrap, Vitest, Postman, Git

Databases: MongoDB, PostgreSQL, Supabase

Cloud & DevOps: AWS (API Gateway, Step Functions, Amplify), Vercel, REST APIs, JSON, Web Services, Agile, CI/CD, Docker, Linux/Unix

Other: Client-Server Architecture, API Development, Siemens NX
